

AGC

LUXCLEAR® *Protect*

As the world's largest glass manufacturer, AGC provides the widest range of glass products for both interior and exterior applications.

LUXCLEAR *Protect* is a coated glass product developed to protect the surface of the glass by preventing corrosion due to contaminants related to water, heat, and high humidity. Over time, surface corrosion caused by this exposure can age the glass, resulting in a dull and dirty appearance that worsens the longer the exposure exists. The LUXCLEAR *Protect* coating fuses with the glass and permanently seals the glass surface so it will remain clear and new looking for the life of the product.

It is easy to the glass looking new and pristine using traditional household cleaners. LUXCLEAR *Protect* is ideal for applications where there is water, heat, or high humidity such as, shower enclosures, bathrooms, swimming pool enclosures, sunrooms, and car washes.

AGC is dedicated to providing world class service that is second to none, and can help you extend the life of your glass with LUXCLEAR *Protect*.
